A blower door test measures how airtight a home is by using a powerful fan temporarily installed in an exterior doorway. The fan depressurizes the house, making it easier to identify where outside air is leaking through gaps and cracks.

For air sealing, it's important because it:

- Identifies where the biggest air leaks are.
- Provides a measurable result, typically in ACH50 (air changes per hour at 50 Pa).
- Helps target air-sealing work instead of simply guessing where leaks are.

There are several companies in Newfoundland and Labrador that perform this service:

AmeriSpec Inspection Services
709-687-4673
glocke.amerispec@gmail.com

Homesol Building Solutions
1-855-489-5305
chad.blakney@homesol.ca

R-U Green Energy Solutions
1-800-676-1663
consulting@rugreen.ca
rugreen.ca

ThermalWise
709-237-9473 / 877-771-9276
info@thermalwise.ca
thermalwise.ca/

Transfer Energy
709-699-4641
Steve.t@transferenergy.ca
transferenergy.ca
